

## Aoraki Stockfoods is a family business

Starting in 1998, my wife Shona and I specialise in the manufacture of calf meal supplying farmers in Central Otago, South Canterbury, Marlborough, West Coast, Mid Canterbury, North Otago and North Canterbury. As a livestock farmer, I know the importance of quality feed and I don't hesitate in rejecting grain or other raw materials that don't meet our standards.

We run a low-cost/high-value business, our feedmill is debt free and being sited on our farm also helps to keep our costs down. Over the years I have continued to improve the efficiency of the feedmill and we can now manufacture and bag in excess of 50 tonne in an 8 hour day. We do not employ travelling salesmen though you may receive a visit from me in the autumn.

Aoraki Calf Meal can be delivered to your farm or you can pick it up direct from our feedmill. For more information including our latest prices, please visit our website [www.aorakistockfoods.co.nz](http://www.aorakistockfoods.co.nz)

## Twenty one reasons why Aoraki Calf Meal is so successful in giving calves the best start.

1. Aoraki Calf Meal is a balanced blend of ingredients, imagine how healthy you would be if you only ate potatoes every day. Our calf meal is a blend of Barley, Wheat, Soybean Meal, Peas, Molasses, Canola Oil plus micronutrients.
2. Soya bean meal and peas are our main sources of protein, both highly palatable and digestible.
3. Aoraki Calf Meal includes a Coccidiostat (Bovatec) at 50% above the standard rate.
4. Aoraki Calf Meal includes Xtract instant – A blend of Carvacrol, Cinnamaldehyde, and Capsicum Oleoresin. A natural alternative to antibiotics enabling higher performance and health status.
5. Aoraki Calf Meal includes Product "X" to improve feed intake as well as increase glucose, water and sodium absorption.
6. Calves start eating calf meal at an earlier age compared to pellets.
7. Calves eat wet meal, but not wet pellets.
8. You can see what is in the meal, nothing is hidden.
9. Calves will lick the ground clean, little is wasted.
10. No grass seed screenings (tests results show it high in protein but it has low digestible protein for calves, a cheap way to lift protein test results).
11. We have never used imported grain.
12. No other industry by-products are used in our calf meal.
13. No palm kernel meal, copra meal or tapioca, in our calf meal.
14. No charge for pallets, however if practical please send them back.
15. Aoraki Calf Meal is low cost with high value. When it comes to value for money we are very hard to beat.
16. We specialise in manufacturing calf meal and have been making it since 1998, we know what works.
17. We understand that when you say you need the calf meal tomorrow, you really do need it tomorrow. We strive to deliver on time every time.
18. We are not a large corporate company, we are a family business.
19. We are farmers working for farmers.
20. We give back to the community with our time and sponsorship.
21. We are nice people. 😊

## Fresh in small regular amounts

There is a big advantage in keeping the meal fresh, especially for your very young calves. You will agree that bread tastes best when it is fresh out of the oven. We don't stockpile calf meal months in advance. We only keep enough calf meal in stock to last a short time, ensuring it

stays fresh. We encourage you to buy small amounts at the start of the season while you continue to get new calves. When feeding your calves, put only enough in the trough to last 24 hours and ensure the trough is clean before adding fresh meal.

## HIGH OCTANE PLUS CALF MEAL

Ideal as a starter diet and is often fed the whole season

Protein sources are Soya Bean Meal and Peas, two products that are high in digestible protein. Energy sources are Barley, Wheat, Molasses, and Canola Oil. Also included are Limestone, Salt, Vitamins, Minerals and Bovatec / Lassalocid A4395 for coccidiosis control. There is no Palm Kernel, Copra, Grass Seed Offal or other shortcuts used in Aoraki Calf Meals.

Typical Analysis: Energy 12.8 -13.6 MJ/kg, Crude Protein 18% - 20%, Crude Fibre Max 7%, Salt Max 2%, Crude Fat Max 7%, DM 88%. Packed in 25kg bags.

## LOW PROTEIN PLUS CALF MEAL

Suitable for weaned calves when spring grass is high in protein

Made using the same ingredients as in "High Octane Aoraki Calf Meal", formulated to have lower protein. Once your calf is grazing spring pasture it is more important to maintain energy whilst the calf's rumen is increasing in size. To achieve a high energy level the raw materials need to be highly digestible and a balance of ingredients is beneficial. The range of protein sources used gives the correct balance of amino acids.

Typical Analysis: Energy 12.9 -13.8 MJ/kg Crude Protein 15% - 16%, Crude Fibre Max 10%, Salt Max 2%, Crude Fat Max 6%, DM 88%. Packed in 25kg bags.

SPECIALISTS IN THE MANUFACTURE  
OF CALF MEAL SINCE 1998

### Aoraki Calf Meal

- High in dry matter
- Fibrous texture
- Balanced ingredients
- Competitively priced
- Delivered on time and fresh from the mill

**TASTES GOOD...  
SMELLS GOOD...  
AND CALVES LOVE IT!**
